Executive Profile

Hands-on technology executive with more than 20 years building software and over 15 years leading product and engineering organizations. Career spans games, real-time betting, enterprise platforms, Google-scale ML products and the Google Sovereign Cloud program for France and Germany (~1B EUR). Leverages early-career game-development practices - user focus, rapid feedback and time to market - in complex enterprise technology. Makes data-driven decisions using statistics, product evidence and operational metrics to test assumptions and set priorities under pressure. Leads architecture and engineering while owning organizations, partners and outcomes.

20+ YEARS BUILDING SOFTWARE	15+ YEARS LEADING ORGANIZATIONS	120+ ENGINEERS LED INTERNATIONALLY	13 SHIPPED GAME CREDITS	~1B EUR SOVEREIGN CLOUD PROGRAM
-----------------------------------	---------------------------------------	--	-------------------------------	---------------------------------------

Fit for the Technical Executive Mandate

Sovereign cloud architecture

Leads Trust Center for Google Sovereign Cloud France and Germany with Thales. All platform data flows pass through this defining sovereignty layer.

Platform modernization

Moved critical infrastructure to Google Cloud and Kubernetes, improved observability and incident management, introduced continuous deployment and sustained 99.96-99.97% uptime.

Production AI and data products

Led Google teams building competitive insights, traffic prediction, demand analysis and recommendations for tens of millions of merchants.

Data product craft and time to market

Applies game-development discipline: start with the user, shorten feedback loops, use statistics and product evidence, and ship under tight deadlines.

End-to-end leadership

Has led architecture, security, operations, partners, staffing, HR and administration, including organizations of more than 120 engineers across multiple continents.

Professional Experience

Oct 2024 - Present
Munich, Germany

Senior Software Engineering Manager, Sovereign Cloud | Google

- Leads Trust Center across Google Sovereign Cloud France and Germany in partnership with Thales. All platform data flows pass through this defining sovereignty component, making it the reason the platform is sovereign rather than another Google Cloud region and a critical enabler of a EUR 1 billion program.
- Leads approximately 30 engineers and 10 external specialists in Germany and integrates their work with teams in India and the United States.
- Led the physical-security workstream and handover and established engineering collaboration with the strategic partner.
- Works directly on architecture and ensures security and compliance requirements shape implementation from the start.

Jul 2021 - Oct 2024
Munich and Zurich

Engineering Manager, Merchant Growth Tools | Google

- Directed three engineering teams building reporting, guidance and AI-driven insights across Merchant Center, email and APIs.
- Launched competitive insights, traffic prediction, demand analysis and recommendations for tens of millions of merchants.
- Combined ML, large-scale data and product UX while leading distributed teams through growth, reorganizations, on-call operations and new-product launches.

Aug 2020 - Jul 2021
International

Head of the International Engineering Guild | Amber

- Led more than 120 engineers in Mexico, Ukraine and Taiwan; drove staffing, management hiring, cross-site learning and collaboration.
- Opened the Ukraine subsidiary through a build-operate-transfer model and performed engineering due diligence on potential development partners.
- Helped define and roll out a multi-year strategy, redesigned engineering-management responsibilities and supported an organization-wide values transformation.

Executive and Platform Leadership

Sep 2018 - Apr 2020
Worldwide and Lviv,
Ukraine

Chief Technology Officer and Managing Director | Scout Gaming Group

- Increased platform uptime to 99.96-99.97% on a six-month rolling basis, including planned downtime for cloud migration and major database upgrades.
- Moved critical infrastructure to Google Cloud and Kubernetes; improved monitoring, incident management and platform performance.
- Replaced periodic releases with regular deployment and then continuous deployment while updating architecture across multiple products.
- Led security and compliance work for ISO 27001, MGA and UKGC audits and preparation for a Swedish gambling license.
- Developed algorithms for fixed-odds betting on fantasy points and supported product launches with a hands-on technical and commercial approach.

Jul 2017 - Aug 2018
Bucharest, Romania

EM Sports Chief Technology Officer | EveryMatrix

- Led a cross-functional organization spanning engineering, product analysis, project management and quality assurance across Romania, Ukraine, China and Vietnam.
- Introduced cross-functional squads, launched a new OddsMatrix backend and back office, and migrated operators incrementally to the new platform.
- Strengthened observability, service ownership, incident response, data integrity, release automation and evidence-based operating reviews using New Relic, Kibana and Grafana.
- Directed a modular, multi-tenant platform targeting sub-second odds delay, with more than 27,000 monthly live events and 60,000 total monthly events worldwide.

Oct 2014 - Jul 2017
Bucharest, Romania

Head of Development Romania, Mail and Media | 1&1 Internet Development

- Managed software-development managers, product owners, program management, QA and software and security architects.
- Merged two development departments totaling approximately 60 employees and contractors while keeping active products on track and clarifying accountability.
- Introduced governance for schedules, staffing, risk, architecture and security; created portfolio-management and security-architect roles.
- Built full technical and business ownership in Bucharest for Online Office, one of the company's flagship products, and established a new engineering team with an outsourcing partner.

2004 - 2014
Bucharest and Kyiv

Head of Game Development Studio | Ubisoft

- Progressed from engine programmer and lead programmer through producer to full studio leadership, remaining involved across the complete game-development lifecycle.
- Ran product and technology development together with staffing, organizational design, people development, HR, administration, resource allocation and partner coordination.
- Expanded the Kyiv portfolio from three to six projects in parallel and reduced voluntary departures tenfold through stronger management, staffing and team development.
- Led distributed teams of up to 50 people and is publicly credited on 13 shipped games, including Assassin's Creed, Far Cry, Trials, H.A.W.X and Silent Hunter titles.
- Introduced animation, export, data-editing and scripted-AI technologies and carried game-development principles - user focus, rapid feedback and time to market - into later technology-leadership roles.

Aug 2002 - May 2004

Software Engineer, Architect and Support Engineer | Bluenote Communication

- Developed Java, C++ and C# systems for enterprise-scale phone recording and personnel-monitoring products.

Selected Platform and Product Work

Program	Scope and contribution
Google Merchant Growth	AI and ML-driven competitive benchmarking, traffic forecasting, demand and assortment insights, recommendations and reporting for tens of millions of merchants.
Google Sovereign Cloud	Trust Center leadership for France and Germany with Thales, plus integration across Germany, India and the United States for a EUR 1 billion program spanning architecture, compliance, physical security and handover.
Scout and OddsMatrix	Cloud and Kubernetes migration, continuous deployment, architecture renewal, compliance audits and modular multi-tenant sports platforms.
Ubisoft game studio	End-to-end studio leadership across technology, products, people, HR and administration, with work on Assassin's Creed, Far Cry, Trials Fusion, UPlay and Silent Hunter.

Leadership Evidence

Twenty LinkedIn recommendations from supervisors, peers, direct reports and clients spanning 2010 to 2023 consistently validate technical depth, strategic judgment, organizational change, international collaboration, people leadership and disciplined execution.

Google leaders and peers

Describe a "remarkable technologist and engineering lead" whose judgment, collaboration and execution enabled successful ML-driven products.

Scout CEO and engineering leaders

Report a "significant increase in the stability and performance of the platform," stronger metrics, faster execution and successful cloud and compliance work.

Cross-career feedback

Consistently cites technical credibility, organizational transformation, supportive but demanding leadership, simplification, transparency and effective international collaboration.

Executive Education

Stanford Online Artificial Intelligence Professional Program	2025 - 2026
IESE Business School General Management Program	2024 - 2025
INSEAD Executive Certificate in Global Management	2023 - 2024
Gheorghe Asachi Technical University of Iasi MSc Distributed Systems and BSc Computer Sciences	1999 - 2005

Selected Credentials

- **Stanford Online:** AI Security; Artificial Intelligence; Deep Reinforcement Learning; Machine Learning; Artificial Intelligence Principles and Techniques | 2025 - 2026
- **INSEAD:** Strategic R&D Management; Leading Across Borders and Cultures; The Leadership Transition | 2024
- **DeepLearning AI and Coursera:** Natural Language Processing Specialization; TensorFlow Advanced Techniques | 2022 - 2023
- **Project management certifications:** PMP, PMI-ACP, PRINCE2 and AgilePM

Leadership and Technology Capabilities

Technology strategy Architecture standards, investment sequencing, measurable KPIs, technical trade-offs and R&D strategy	AI and data Production ML and AI products, statistics, forecasting, recommendations and AI security
Cloud and platforms Google Cloud, Kubernetes, sovereign cloud, scalable distributed systems and multi-tenant platforms	Product engineering User focus, time to market, continuous deployment, observability, incident response and engineering metrics
Security and governance Enterprise and physical security, regulated audits, architecture governance, risk and compliance	Organization leadership Global teams, partner integration, management development, staffing, HR and organizational transformation
